Purpose: Create a procedure for activating traffic signal at station one (1) for responding apparatus.

The traffic light can be operated via:

- Push-button activation on the apparatus floor, ***or***
- Console in Fire Alarm (FA).

The traffic light in front of Station 1 is controlled by a timer. Once it is activated (either on apparatus floor and/or FA console) the light controlling traffic on Post Road should turn red and the light facing station one should turn green.

When apparatus is responding to alarms from station 1 every effort should be made to utilize the traffic signal. In the event the light cannot be manually activated by responding personnel, a company officer can request the Fire Alarm Operator (FAO) activate the light from the radio console.

At all times, due care must be exercised when leaving any station.

In all cases, apparatus must stop at the end of the ramp before entering Post Road to ensure it is safe to do so.

It is your responsibility to operate the vehicle in a safe manner.
